

# EPREUVE D'ANGLAIS

<b>Nombre de pages de l'épreuve</b>	<b>pages</b>
<b>Durée de l'épreuve</b>	<b>1h00</b>

## Conseils méthodologiques

L'épreuve comporte 2 parties.

**1re partie :**

### **Grammaire et vocabulaire (40 questions)**

Dans cette partie, le candidat démontrera la richesse de ses connaissances linguistiques de l'anglais.

Les questions porteront sur le niveau général requis dans l'enseignement secondaire.

**2e partie :**

### **Textes de compréhension écrite (10 questions)**

Cette partie comporte 2 textes extraits d'articles de presse, de livres... portant sur l'actualité internationale, des faits de société, des analyses d'évènements.

L'évaluation de la compréhension de la langue écrite porte aussi bien sur le sens explicite du texte que sur sa signification profonde ou implicite.

## **Consignes**

**Questions 1 à 20 :** Dans chaque phrase, un mot ou une expression manque. Sélectionnez la bonne réponse **A. B. C. D.** pour compléter la phrase.

**Questions 21 à 40 :** Dans chaque question, une seule phrase est correcte grammaticalement / lexicalement. Sélectionnez la bonne réponse **A. B. C. D.**

**Questions 41 à 60 :** Sélectionnez la bonne réponse à chaque question **A. B. C. D.**

Vous vous servirez de votre téléphone pour indiquer vos réponses. Une seule bonne réponse par question.

## PART II: READING COMPREHENSION

Read the texts and answer the following questions by choosing the best answer.

### Text 1

Investors on Wall Street are turning their attention away from natural gas and instead beginning to focus on electricity. Shares of gas utility companies have long dominated the market, and been considered sound investments. Well, that is perhaps no longer the case. It seems investor confidence in the future of our fossil fuel dependency has finally reached a tipping point.

How big of an impact are we seeing? Well, for the first time in a decade, the shares in local gas distributors in the U.S. are selling for far less than those of electricity utilities, in relation to their projected earnings. For a side-by-side comparison, S&P's gas utilities index is currently trading at 16.7 while its electric utilities index is trading at 17.1. This might only be a small margin, but given the dominance of the natural gas supply market, it is a significant one. And if you want another, more eyebrow-raising figure, then look at NextEra Energy Inc. This company is the world's largest investor-owned developer of wind and solar, and is trading at 28 times its projected earnings. None of this means we are going to wake up in a world tomorrow where nobody uses natural gas anymore. Natural gas remains the primary source of energy in the U.S. since easy-to-source, low-cost alternatives are not widely available. Fracturing gas is still cheap, and gas has even contributed to cutting carbon dioxide emissions by replacing the 'dirty coal' used in power generation. Those within the gas industry point to examples like these for why gas should be a bridge to cleaner energy alternatives instead of being replaced by them. We aren't quite there yet in terms of widespread renewable energy use, but if the tide is beginning to turn in the U.S. hopefully we will see change elsewhere as well.

#### 41. What shares are Wall Street investors focusing on instead of natural gas?

- A. Carbon dioxide (-0.5)
- B. Electricity (+1)
- C. Coal (0)
- D. Water (0)

#### 42. How is the confidence of investors in the fossil energy?

- A. It is as its lowest (0)
- B. It continues to increase (-0.5)
- C. It is just about to decrease (+1)
- D. It is strongly decreasing (0)

#### 43. How has natural gas helped contribute to reducing carbon dioxide emissions?

- A. It is a clean energy source (0)
- B. It has carbon sequestering properties (-0.5)
- C. It is carbon neutral (0)
- D. It has replaced the dirty coal used in power generation (+1)

#### 44. How is the development of "green" energy in the US?

- A. It is the main source of energy in the US (-0.5)
- B. It could be better (+1)
- C. It could not be better (0)
- D. This energy is not used in the US (0)

#### 45. What does 'a bridge to cleaner energy alternatives' mean in relation to the above text?

- A. The gas industry can 'pave the way' for clean energy alternatives (+1)
- B. The gas and electricity industries need to meet halfway (0)
- C. We need to use both gas and electricity as fuel sources (0)
- D. The gas industry should be totally replaced by electricity (-0.5)

## Text 2

Technology entrepreneur Bret Kugelmass believes that climate change can be fought with nuclear energy. Speaking at an engineering event at the University of Michigan, he declared, "We not only have to stop climate change, but reverse it." Kugelmass is self-admittedly driven by the belief that the incredibly efficient power production of nuclear energy has the ability to clean up carbon emissions in our atmosphere. While alternative sources of renewable energy such as wind and solar are great for reducing our own environmental impact, they're nowhere near powerful enough to remove carbon from our air. Nuclear is our only source of energy that is equally clean and powerful. But there are two major problems, Kugelmass concedes. The first is the safety record of nuclear energy. Incidents like Chernobyl and Fukushima have created a huge amount of distrust and fear, and the term "radiation" is still a sinister one. It's difficult to pass the blame for these disasters on to human irresponsibility, rather than the technology's own failings. The biggest problem though, Kugelsman claims, is simply money. In its current form, nuclear energy is not profitable enough to receive large scale investment. He believes that if it can be strategized again as a genuine, profitable business like oil, coal or gas, then nuclear's popularity will sky rocket. With continued investment and innovation, perhaps we will one day soon be able to clean the earth up again.

### 46. What is the main purpose of this text?

- A. To promote nuclear technology. (0)
- B. To tell us why people don't trust nuclear technology. (-0.5)
- C. To discuss carbon emissions. (0)
- D. To tell us about a tech entrepreneurs opinion on nuclear energy. (+1)

### 47. According to the text, what is so good about nuclear energy?

- A. It is very cheap to produce. (0)
- B. It is clean. (+1)
- C. It is very safe. (-0.5)
- D. It is as powerful as renewable energies. (0)

### 48. According to the text, why do many people fear nuclear energy?

- A. Because of past nuclear disasters. (+1)
- B. Because it can cause international wars. (0)
- C. Because it could reverse climate change. (-0.5)
- D. Because it is so powerful. (0)

### 49. What is the key to enabling nuclear energy to reverse climate change, according to Bret Kugelmass?

- A. Using renewable energies like wind and solar alongside nuclear. (-0.5)
- B. Making it a worthwhile venture for big businesses to make money. (+1)
- C. Handling nuclear energy responsibly. (0)
- D. Making it more efficient than coal, oil or gas energy. (0)

### 50. What is Bert Kugelmass' hope?

- A. That we will be able to clean our planet. (+1)
- B. That renewable energies will be the main source of energy. (0)
- C. That there will never be any nuclear catastrophes again. (0)
- D. That we no longer need to use coal. (-0.5)
